Absolute comfort at the heart of the home

Explore all the variety for the window – sun shading for the kitchen

Every room has its own particular requirements for brightness and sun shading. Generally, plenty of glare-free light is required in the kitchen from morning until night for cooking and housework. And if this is also where the dining area is, then the atmosphere should be aimed more at comfort when sharing a meal together. This calls for flexible sun shading that allows the incidence of light to be adjusted to the time of day and the occupants' requirements. Warema offers a wide range of solutions here that blend harmoniously with the ambience and guarantee well-being in the kitchen.

Daylight and privacy can be enjoyed in equal measure with Warema's external venetian blinds. As well as creating a feel-good ambience in the kitchen, where the individually adjustable slat angles allow the incidence of sun light to be controlled as desired, they also offer protection against curious glances.

Warema pleated blinds can be used for many different purposes. They are suitable both for small tilt and turn windows and for large balcony doors. The honeycomb patterns are available in pretty colours and different degrees of transparency. The air pocket of the honeycombs also offer excellent heat insulation.

As well as offering an abundance of attractive slat designs, the installation technology of the Warema venetian blind is also extremely uncomplicated so it can also easily be installed in rental properties. Adhesive profiles or Velcro supports mean that clean installation with absolutely no screws or tools is possible.

Especially in the kitchen, the sun shading system is exposed to a high level of humidity from evaporating cooking water. In this special environment, fabric may well lose its shape and colour over time. In order to ensure the durability of the sun shading system, Warema offers textiles that are suitable for use in humid environments, for instance in the form of pleated blinds.

The lighting ambience on the inside is also determined by the external sun shading system. The performance spectrum of the external blind can be utilised in full with the assistance of intelligent controls. Pre-defined settings can easily be operated by smartphone with a user-friendly smart-home solution such as WMS Webcontrol by Warema.

The bracket roller blind by Warema appeals for its filigree looks, and offers aesthetic sun shading for modern interiors. The options for operating the motor either by means of a ball chain or manually ensure that regulating the incidence of light is as easy as possible.

A freely suspended pleated blind offers airy protection for large windows. Thanks to the varied colour spectrum, the curtain can be matched harmoniously to its surroundings. The oriental charm of the accordion-pleated fabric creates a holiday atmosphere.

The occupants can use the flexible slats of the venetian blind to measure the incidence of light in the room individually, which results in a pleasant interplay between light and shadow. Installing it in the glass profile retains the full functionality of the tilt and turn window. And leaves the window fully accessible for ventilation.

Depending on the particular design, roller blinds are suitable for almost any window size and, thanks to the height-adjustable curtain, offer targeted protection against curious glances and the sun's rays. They are available in a wide range of designs for individual window dressings. At the same time, by choosing slightly transparent or completely opaque fabrics, the user can decide how much sun to allow through.

Horizontal pleats guarantee effective protection against insects if swivel or sash frames are not possible due to a lack of space. The pleats can be pulled up or folded horizontally, meaning the occupants of the room can enjoy fresh air with no concerns while insects and pollen are left outside.
